

## Department of Energy

## § 430.22

is designed to operate at any voltage within the band.

*Wall electric heater* means an electric heater (excluding baseboard electric heaters) which is intended to be recessed in or surface mounted on walls, which transfers heat by radiation and/or convection (either natural or forced) and which includes forced convectors, natural convectors, radiant heaters, high wall or valance heaters.

*Water closet* means a plumbing fixture that has a water-containing receptor which receives liquid and solid body waste, and upon actuation, conveys the waste through an exposed integral trap seal into a gravity drainage system, except such term does not include fixtures designed for installation in prisons.

*Water heater* means a product which utilizes oil, gas, or electricity to heat potable water for use outside the heater upon demand, including—

(a) Storage type units which heat and store water at a thermostatically controlled temperature, including gas storage water heaters with an input of 75,000 Btu per hour or less, oil storage water heaters with an input of 105,000 Btu per hour or less, and electric storage water heaters with an input of 12 kilowatts or less;

(b) Instantaneous type units which heat water but contain no more than one gallon of water per 4,000 Btu per hour of input, including gas instantaneous water heaters with an input of 200,000 Btu per hour or less, oil instantaneous water heaters with an input of 210,000 Btu per hour or less, and electric instantaneous water heaters with an input of 12 kilowatts or less; and

(c) Heat pump type units, with a maximum current rating of 24 amperes at a voltage no greater than 250 volts, which are products designed to transfer thermal energy from one temperature level to a higher temperature level for the purpose of heating water, including all ancillary equipment such as fans, storage tanks, pumps, or controls necessary for the device to perform its function.

*Water use* means the quantity of water flowing through a showerhead, faucet, water closet, or urinal at point of use, determined in accordance with test procedures under Appendices S and T of subpart B of this part.

*Weatherized warm air furnace or boiler* means a furnace or boiler designed for installation outdoors, approved for resistance to wind, rain, and snow, and supplied with its own venting system.

[42 FR 27898, June 1, 1977]

EDITORIAL NOTE: For Federal Register citations affecting § 430.2, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and on GPO Access.

EFFECTIVE DATE NOTE: At 66 FR 7199, Jan. 22, 2001, § 430.2 was amended by adding a definition for “space-constrained products”, effective Feb. 21, 2001. At 66 FR 8745, Feb. 2, 2001, the effective date was delayed until Apr. 23, 2001. At 66 FR 20191, Apr. 20, 2001, the effective date was postponed from Apr. 23, 2001, pending the outcome of petitions for administrative reconsideration and judicial review. For the convenience of the user, the added text is set forth as follows:

### § 430.2 Definitions.

\* \* \* \* \*

*Space constrained product* means a central air conditioner or heat pump:

(1) That has rated cooling capacities no greater than 30,000 BTU/hr;

(2) That has an outdoor or indoor unit having at least two overall exterior dimensions or an overall displacement that:

(i) Are (is) substantially smaller than those of other units that are (i) currently usually installed in site-built single family homes, and (ii) of a similar cooling, and, if a heat pump, heating, capacity, and

(ii) If increased, would certainly result in a considerable increase in the usual cost of installation or would certainly result in a significant loss in the utility of the product to the consumer; and

(3) Of a product type that was available for purchase in the United States as of December 1, 2000.

\* \* \* \* \*

## Subpart B—Test Procedures

### § 430.21 Purpose and scope.

This subpart contains test procedures required to be prescribed by DOE pursuant to section 323 of the Act.

### § 430.22 Reference Sources.

(a) *Materials incorporated by reference.*—(1) *General.* The following standards which are not otherwise set forth in Part 430 are incorporated by

reference and made a part of Part 430. The standards listed in this section have been approved for incorporation by reference by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. The specified versions of the standards are incorporated, and any subsequent amendment to a standard by the standard-setting organization will not affect the DOE test procedures unless and until those test procedures are amended by DOE.

(2) *Availability of standards.* The standards incorporated by reference are available for inspection at:

(i) Office of the Federal Register Information Center, 800 North Capitol Street, NW., Suite 700, Washington, DC.

(ii) U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Hearings and Dockets, Forrestal Building, 1000 Independence Ave, SW, Washington, DC 20585.

(b) *List of Sources and Standards Incorporated by Reference.* (1) American National Standards Institute (ANSI). The ANSI standards listed in this paragraph may be obtained from the American National Standards Institute, 1430 Broadway, New York, NY 10018, (212) 642-4900.

1. ANSI C78.1-1991, “for Fluorescent Lamps—Rapid-Start Types—Dimensional and Electrical Characteristics”
2. ANSI C78.2-1991, “for Fluorescent Lamps—Preheat-Start Types—Dimensional and Electrical Characteristics of Fluorescent Lamps”
3. ANSI C78.3-1991, “for Fluorescent Lamps—Instant-Start and Cold-Cathode Types—Dimensional and Electrical Characteristics”
4. ANSI C78.375-1991, “for Fluorescent Lamps—Guide for Electrical Measurements”
5. ANSI C82.3-1983 “for Reference Ballasts for Fluorescent Lamps”
6. ANSI C79.1-1994, “Nomenclature for Glass Bulbs—Intended for Use with Electric Lamps”
7. ANSI C78.21-1989, “Incandescent Lamps—PAR and R Shapes”

(2) Illuminating Engineering Society of North America (IESNA). The IESNA standards listed in this paragraph may be obtained from the Illuminating Engineering Society of North America, 120 Wall Street, Floor 17, New York, NY 10005-4001, (212) 248-5000.

1. Illuminating Engineering Society LM-9-88, “IES Approved Method for the Electrical and Photometric Measurements of Fluorescent Lamps”
2. Illuminating Engineering Society of North America LM-16-1993, “IESNA Practical Guide to Colorimetry of Light Sources”
3. Illuminating Engineering Society of North America LM-20-1994, “IESNA Approved Method for Photometric Testing of Reflector-Type Lamps”
4. Illuminating Engineering Society of North America LM-45-91, “IES Approved Method for Electrical and Photometric Measurements of General Service Incandescent Filament Lamps”
5. Illuminating Engineering Society of North America LM-58-1994, “IESNA Guide to Spectroradiometric Measurements”
6. Illuminating Engineering Society of North America LM-66-1991, “IES Approved Method for the Electrical and Photometric Measurements of Single-Ended Compact Fluorescent Lamps”
7. *Illuminating Engineering Society of North America Lighting Handbook, Reference and Application*, 8th Edition, 1993, Chapter 6, Light Sources

(3) International Commission on Illumination (CIE). The CIE standards listed in this paragraph may be obtained from the International Commission on Illumination, CIE Bureau Central, Kegelgasse 27, A-1030, Vienna, Austria. CIE publications are also available from TLA Lighting Consultants, 7 Pond Street, Salem, MA 10970, (508) 745-6870.

1. International Commission on Illumination (CIE) Publication No. 13.2 1974, corrected reprint 1993, “Method of Measuring and Specifying Color Rendering Properties of Light Sources,” ISBN 3 900 734 39 9

(4) International Electrotechnical Commission. Copies of the International Electrotechnical Commission Publications can be obtained from the American National Standards Institute, 11 West 42nd Street, New York, New York 10036, (212) 642-4936.

1. IEC 705, “Methods for Measuring the Performance of Microwave Ovens for Household and Similar Purposes,” Section 4, Methods of Measurement, Paragraph 13 “Electrical Power Input Measurement,” and Paragraph 14 “Efficiency” (1988).
2. IEC 705, Amendment 2, “Methods for Measuring the Performance of Microwave Ovens for Household and Similar Purposes,” Section 4, Methods of Measurement, Paragraph 12 “Microwave Power Output Measurement” (1993).

[59 FR 49474, Sept. 28, 1994, as amended at 62 FR 29239, May 29, 1997; 62 FR 51981, Oct. 3, 1997; 63 FR 13316, Mar. 18, 1998]

EFFECTIVE DATE NOTE: At 66 FR 65095, Dec. 18, 2001, § 430.22 was amended by revising paragraph (b)(1) introductory text and adding paragraph (b)(7), effective June 17, 2002. For the convenience of the user, the revised and added text follows:

### § 430.22 Reference Sources.

\* \* \* \* \*

(b) \* \* \* (1) American National Standards Institute (ANSI). The ANSI standards listed in this paragraph may be obtained from the American National Standards Institute, 25 W. 43rd Street, 4th Floor, New York, NY 10036, (212) 642-4900.

\* \* \* \* \*

(7) Association of Home Appliance Manufacturers, 1111 19th Street, NW., Suite 402, Washington, DC 20036, (202) 872-5955, "American National Standard, Household Electric Dishwashers, ANSI/AHAM DW-1-1992."

### § 430.23 Test procedures for measures of energy and water consumption.

(a) *Refrigerators and refrigerator-freezers.* (1) The estimated annual operating cost for electric refrigerators and electric refrigerator-freezers without an anti-sweat heater switch shall be the product of the following three factors: (i) The representative average-use cycle of 365 cycles per year, (ii) the average per-cycle energy consumption for the standard cycle in kilowatt-hours per cycle, determined according to 6.2 (6.3.6 for externally vented units) of appendix A1 of this subpart, and (iii) the representative average unit cost of electricity in dollars per kilowatt-hour as provided by the Secretary, the resulting product then being rounded off to the nearest dollar per year.

(2) The estimated annual operating cost for electric refrigerators and electric refrigerator-freezers with an anti-sweat heater switch shall be the product of the following three factors: (i) The representative average-use cycle of 365 cycles per year, (ii) half the sum of the average per-cycle energy consumption for the standard cycle and the average per-cycle energy consumption for a test cycle type with the anti-sweat heater switch in the position set at the factory just prior to shipping, each in kilowatt-hours per cycle, determined according to 6.2 (6.3.6 for externally vented units) of appendix A1 of this subpart, and (iii) the representative average unit cost of electricity in dollars per kilowatt-hour as provided by the Secretary, the resulting product then being rounded off to the nearest dollar per year.
